

### Appropriate for PEG insertion

#### Considerations

- Patients requiring enteral feeding for >4 weeks
- Long term safer enteral feeding
- To enable access to GI tract while undergoing treatment eg radiotherapy for head and neck cancer

#### Aims of Nutrition MDT

- To promote an MDT discussion regarding PEG
- Prevent unnecessary PEG placement
- To optimise nutrition support in the most appropriate method
- To provide support for Feed at Risk
- To link to Palliative Care where necessary
- Suggestions for further investigations or alternatives such as eg, bridges, RIGS, mittens
